

URIEL DAHAN | Software Developer | AI Automation & Backend

urielda00@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | 050-5828-139

SUMMARY

Software Developer with hands-on experience building and operating production systems, AI-assisted business automations and backend infrastructure. Strong end-to-end ownership across architecture, implementation, deployment and production troubleshooting.

PROFESSIONAL EXPERIENCE

Software Developer | Azrieli College of Engineering | 01/2026 - Present

- Led LabBooker from architecture to production - a MERN reservation platform integrated with college systems and used by ~180 users, owning backend, frontend, authentication, deployment and ongoing operations.
- Maintain the college's Final Projects Management System for 200+ users, including production incident response, security remediation and reliability improvements.
- Helped establish an AI/HPC development environment from hardware to operations, including Linux servers, Docker/Compose, Proxmox, VMs, Ansible, Jenkins, Zabbix, Nginx, Cloudflare and GitHub Actions.

AI Automation Developer | Place-IL & 8200 for Businesses | 06/2026 - Present

- Owned the end-to-end design and implementation of an AI-powered automation for Gvinage, replacing a manual email-to-order workflow with automated classification, document extraction and structured order processing.
- Built the production workflow with Make, OpenAI APIs, Supabase and React, including validation, monitoring, error handling and human-in-the-loop review.
- Worked directly with the business, technical mentors and industry professionals to translate an operational bottleneck into requirements, architecture and a working solution.

Full-Stack Developer | Daily-English Startup | 10/2023 - 02/2024

- Developed React/TypeScript and Node.js product features, integrating backend data flows into user-facing functionality and improving application state and synchronization.

SELECTED PROJECT

PractIt | Independent Production Platform |

- Designed and built a production full-stack learning platform with React, Node.js/Express, MongoDB and Docker, covering architecture, authentication, APIs, CI/CD, deployment and production infrastructure.
- Use an AI-native engineering workflow for specification, implementation and testing while retaining ownership of architecture decisions, validation, integration and production readiness

PORTFOLIO:

- Full-Stack, Backend, AI & Automation projects - [View Portfolio](#)

EDUCATION

B.Sc. in Computer Science | Azrieli College of Engineering | Expected 2028 | GPA: 88

CORE TECHNOLOGIES

Node.js, Express, React, TypeScript/JavaScript, Python, Java, MongoDB, PostgreSQL, Docker, Linux, REST APIs, GitHub Actions, OpenAI APIs, Make, Supabase
